LEAD OPERATIONS ENGINEER & MANAGER

SUMMARY

Great engineering organizations don't scale by adding more tools or people to solve operational problems. They scale by building platforms, automation, and engineering practices that make reliability, efficiency, and developer autonomy the default.

I bring a rare combination of deep systems engineering expertise, platform architecture, and hands-on engineering leadership. Throughout my career, I've worked across infrastructure, data platforms, SRE, DevOps, and MLOps, translating complex operational challenges into scalable engineering solutions. I've led the modernization of legacy infrastructure into cloud-native Kubernetes platforms, migrated 600+ microservices to AWS with zero downtime, and built self-service developer platforms that empowered more than 100 engineers to provision infrastructure and deploy applications independently.

My approach extends beyond technology. I believe effective engineering leaders create clarity, remove friction, and enable engineers to do their best work. I've mentored 15+ engineers, aligned cross-functional teams around architectural direction, and driven engineering practices that improve delivery, observability, and operational resilience. By combining automation, intelligent resource management, and infrastructure modernization, I've also reduced company-wide cloud spending by 50%.

Whether leading an engineering team or serving as a hands-on technical lead, I focus on outcomes that matter: faster delivery, resilient systems, lower operational overhead, and engineering teams that can scale without accumulating unnecessary complexity.

I'm at my best where challenging technical problems meet opportunities to transform how engineering teams operate.

SKILLS

- **Project & Program Management:** End-to-End Migration Planning, Datacenter Decommissioning, Cross-Functional Team Unification, Risk-Mitigation Strategies, Agile & Scrum Methodologies, Strategic Roadmaps
- **Leadership & Management:** Mentoring & Coaching, Career Growth Pathways, Capacity Planning, Cross-Departmental Consolidation, Cross-Functional Team Building Events, Matrixed Leadership, Technical Recruiting, Engineering Team Building (15+ Engineers), FinOps & Cloud Budget Ownership, Architecture Review Board, Scrum Master, Technical Strategy, Cross-Functional Alignment
- **Strategic Operations:** Cultural Shift, DevOps Evangelist, DevEx, SecOps, CI/CD, AI Governance, Global IT Infrastructure Rollouts, Data Center Migrations
- **Security, Compliance & Risk:** SOC 2 Controls, Vulnerability Scanning (Snyk, JFrog Xray), SBOM Generation, Secret Management, Zero-Trust, Auditable Release Governance, Centralized LLM Proxy Gateways, PII Sanitization
- **Cloud & Platform Infrastructure:** AWS (Multi-Account / Multi-Region EKS), Infrastructure as Code (Terraform, Crossplane), Internal Developer Portals (IDPs), Golden Path Templates, Data/AI Platforms (MLOps), Kubernetes (EKS), CI/CD Automation, GitOps, Observability (Datadog), Incident Management, On-Prem Datacenter Ops, Terraform, Crossplane, SRE
- **GitOps & DevSecOps:** ArgoCD, Argo Workflows, GitHub Actions, DevSecOps Guardrails (Snyk, SonarQube, JFrog Artifactory), SOC 2 Compliance, Automated SBOM Generation
- **SRE & Observability:** Datadog APM, OpenTelemetry, PagerDuty, Full-Stack Distributed Tracing, Incident Management & Post-Mortems, Zero-Downtime Migrations
- **Data & MLOps Infrastructure:** Amazon MSK (Apache Kafka), Vespa Cloud (Hybrid Vector + BM25 Search), Kubeflow, MLflow, Feature Stores, ClickHouse, Aerospike, Redis, Enterprise LLM Proxy Gateways
- **FinOps & Cost Optimization:** Karpenater Dynamic Autoscaling, AWS Spot Strategies, Kubecost Allocation, Usage-Based Tagging, Automated Right-Sizing

EXPERIENCE

adMarketplace | New York, NY *Sr. Engineering Manager & Lead Infrastructure Engineer* | Oct 2016 – May 2026

Directed company-wide platform engineering, cloud infrastructure, SRE, and MLOps initiatives. Hired and managed cross-functional engineering teams of 15+ platform and DevOps engineers, served on the Architecture Review Board, acted as Scrum Master, and maintained direct FinOps budget ownership for all cloud infrastructure.

- **Engineering Management & Agile Governance:** Hired, built, and mentored cross-functional platform and DevOps engineering teams (15+ engineers). Served as Scrum Master and an active member of the Architecture Review Board to define engineering career ladders, establish agile delivery standards, and enforce system architecture guardrails across product and data teams.
- **FinOps & Cloud Budget Ownership:** Direct owner of the multi-million dollar cloud infrastructure budget. Reduced enterprise AWS cluster spend by **50% (\$600K+ in annualized OpEx savings)** by implementing Karpenter dynamic autoscaling, aggressive spot instance strategies, Kubecost cost-allocation, and automated right-sizing algorithms.
- **Multi-Account AWS & EKS Architecture:** Architected and maintained multi-account, multi-region AWS cloud infrastructure centered on Amazon EKS across Dev, Staging, Production, and Management environments using Terraform, ArgoCD, and Crossplane.
- **GitOps & Legacy Workload Modernization:** Modernized core engineering workloads by replacing legacy batch and scheduling frameworks (Airflow, Hadoop, Jenkins) with Kubernetes-native Argo Workflows, ArgoCD, and Kubeflow platforms using declarative GitOps.
- **SRE & Full-Stack Observability:** Replaced fragmented legacy monitoring systems with an enterprise-grade Datadog APM, OpenTelemetry, and PagerDuty observability stack—accelerating incident response, mean-time-to-resolution (MTTR), and root-cause analysis across microservices and data pipelines.
- **High-Scale Data Streaming & Vector Search:** Managed high-throughput Amazon MSK (Apache Kafka) data streaming clusters delivering 2B+ daily events (500+ GB/day) alongside production Vespa Cloud search infrastructure, achieving sub-20ms latency at 15,000+ peak QPS across hybrid vector and BM25 indices.
- **Low-Latency Feature Storage:** Provisioned and optimized high-speed distributed storage systems (ClickHouse, Aerospike, Redis) for real-time feature retrieval, distributed ad processing, and low-latency system evaluation.
- **DevSecOps & Enterprise Security:** Strengthened infrastructure security and audit posture by embedding Snyk, SonarQube, and JFrog Artifactory into CI/CD pipelines, supporting SOC 2 compliance and automated SBOM generation.
- **Production MLOps & GenAI Guardrails:** Orchestrated Kubeflow continuous retraining pipelines and MLflow model registries processing 50M+ vector embeddings daily on Kubernetes. Built centralized LLM proxy gateways with automated PII sanitization scripts to enable safe enterprise adoption of AI coding tools (Claude Code, GitHub Copilot).

EDUCATION & CERTIFICATIONS

- **New York Institute of Technology** — B.S. in Computer Science
- **Certification:** AWS Certified Cloud Practitioner
