

IVAN ARJUNE

PLATFORM ENGINEERING LEADER | DEVOPS ARCHITECT

347.781.4826 | iarjune@gmail.com | NYC

SUMMARY

Strategic Developer Experience (DevEx) Leader and Platform Architect with 15+ years of experience accelerating engineering velocity and building secure, cloud-native developer environments. Proven track record of unifying cross-functional teams under centralized Internal Developer Portals (IDPs) and designing self-service "golden paths" that reduce cognitive load for engineering organizations. Deep expertise in modernizing CI/CD pipelines (GitHub Actions, Argo), integrating automated security guardrails, and pioneering the rollout of AI-assisted coding tools to drive productivity and minimize toil. Passionate about partnering with engineering teams to instrument and track key DevEx metrics (MTTR, deploy frequency, build times), continuously optimizing the SDLC to empower developers to ship resilient software seamlessly.

CORE COMPETENCIES & TECH STACK

- **Engineering Leadership:** Cross-Functional Team Management, Agile/Scrum Coaching, Technical Recruiting, Architecture Review, Career Mentorship
- **Cloud & Platform Architecture:** AWS, Kubernetes, Internal Developer Portals, Docker, Infrastructure as Code
- **GitOps & SDLC Automation:** GitHub Actions, ArgoCD, Argo Workflows, Progressive Delivery, Golden Paths Templates, DevSecOps, Release Governance
- **Observability, SRE & Resiliency:** Datadog, ELK, Prometheus, Grafana, PagerDuty, MTTR Reduction, Incident Response, DORA Metrics & SLOs
- **Cost Governance & FinOps:** Cloud Spend Optimization, Kubecost, Auto-Scaling Strategies, Resource Right-Sizing
- **Security & Compliance:** IAM, Secret Management, Container Vulnerability Scanning (Trivy/Snyk), Zero-Trust Architecture

RECENT EXPERIENCES

adMarketplace | New York, NY.

Staff Platform Engineer | Oct 2016 – May 2026

- **Developer Platform & CI/CD Automation:** Unified multiple teams under a centralized internal developer platform (IDP/Developer Portal), creating golden path templates for self-service infrastructure. Modernized CI/CD operations by migrating legacy pipelines

(BitBucket, Jenkins) to GitHub Actions and a Kubernetes-native GitOps architecture (Argo, Crossplane).

- **Observability & DevEx Metrics:** Standardized enterprise observability by migrating to Datadog and OpenTelemetry. Partnered with SRE to instrument and track developer experience metrics (build times, deploy frequency, MTTR), accelerating feedback loops across the SDLC.
- **Engineering Leadership:** Served as Engineering Manager, Scrum Master, and member of the Architecture Review Board; mentored 15+ engineers and established Agile platform practices.
- **Cloud-Native & Hybrid Platform Modernization:** Spearheaded company-wide transition to a cloud-native Kubernetes architecture on AWS and private cloud across 4 accounts (dev, stage, prod, mgmt). Architected two full-stack private cloud data centers using KVM, Rancher, Puppet, and Ceph.
- **AI Tooling & Platform Guardrails:** Evaluated and rolled out AI-assisted coding tools (Claude Code, Windsurf/Codex, ChatGPT) into engineering workflows, implementing centralized LLM proxy gateways and PII sanitization to enforce compliance and organizational guardrails.
- **AI FinOps & Observability:** Leveraged AI tooling to design and implement an automated Kubernetes inventory and reconciliation system, dynamically labeling and tagging cluster resources across environments to drive FinOps cost allocation and enhance observability tracing.
- **High-Throughput Retrieval & Vector Search (Vespa Cloud):** Set up, deployed, and managed production Vespa Cloud search and retrieval infrastructure; optimized schema definitions (services.xml), multi-phase tensor ranking, and real-time streaming ingestion (Kafka) to support low-latency (<50ms) hybrid search (vector + BM25) at high QPS.
- **FinOps & Resource Optimization:** Cut company-wide cloud spend by 50% through automated horizontal pod autoscaling, right-sizing algorithms, spot instance strategies, and cost-allocation dashboards (Kubecost).

Collective | New York, NY

Linux Systems Engineer | Dec 2015 – Oct 2016

- Modernized private cloud infrastructure across 3 data centers supporting 700+ bare-metal servers.
- Automated scale-out provisioning using Terraform, Puppet (Roles/Profiles), Cloudera CDH5, Mesosphere, and The Foreman.

AppNexus (now Microsoft) | New York, NY

Linux Systems Engineer | Dec 2012 – Aug 2015

- Managed provisioning, performance tuning, and global operations for 10,000+ physical servers and 4,000+ VMs in a high-concurrency private cloud environment.
- Integrated Puppet and automated CI/CD build pipelines; scaled monitoring across 60,000+ services using Sumo Logic and CheckMK.

- Enhanced edge and perimeter security via Nexpose, VLAN ACLs, F5 ASM, and NetScaler load balancing.

EDUCATION

- **Bachelor of Science in Computer Science** | New York Institute of Technology.
